

Chieck Cisse

Jonathan Brandenburg

CS536 P6

Instructions to invoke program:

Step 0: unzip submitted file navigate to unpacked p6 directory with a CLI

Step 1: type “make” to compile

Step 2: type “make test” to run the type checking program on test.cmm and creating test.s

Step 3: Open QtSpim

Step 4: Load the program and run it, output should appear in the console.

We’re assuming the program is being run on a device that can utilize a normal MIPS instruction set and that QtSpim is being employed to test it.
